

WHAT IS MANAGED DETECTION & RESPONSE (MDR)?

Managed Detection and Response (MDR) is a fully managed security service that provides organisations with professional threat hunting, monitoring, and response capabilities.

Rather than just providing a software tool, MDR combines advanced technology with human expertise to stop cyberattacks before they can cause damage.

The Benefits of MDR

- ✓ Peace of mind
- ✓ Limits business disruption
- ✓ Speedy response
- ✓ Extra protection

How Does MDR Work?

In simple terms, Managed Detection and Response (MDR) is like having a private, elite security team watching over your business's digital doors and windows 24/7.

Instead of just installing an alarm (software) and hoping you hear it, MDR provides the experts who respond to the alarm, investigate the cause, and catch the intruder for you

Constant Vigilance

A team of human experts monitors your systems around the clock, so you don't have to.

Hunting For Trouble

These experts don't just wait for an alert; they actively hunt for hidden signs of attackers trying to sneak into your network

Instant Action

If an attacker is found, the team can immediately "kick them out" by locking compromised accounts or isolating infected computers before the damage spreads

Peace Of Mind

You can sleep through the night knowing that if a "Christmas morning" attack happens, a professional team is already handling it.

Get Started With MDR
