NORDLAYER FOR MAC

WHAT IS NORDLAYER?

NordLayer is a security application that helps protect your work internet connection. It is especially useful when working remotely, travelling, or using networks outside the office, such as home, hotel, café, or public Wi-Fi.

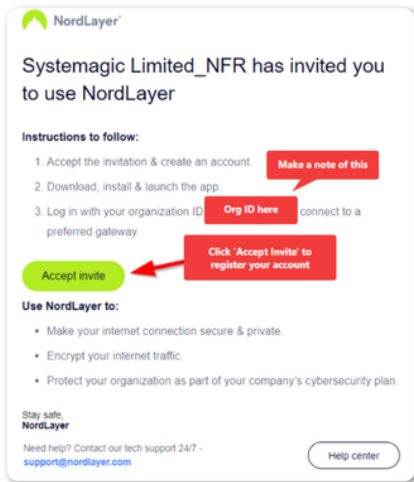

It works by creating a secure, encrypted connection between your device and approved company services. This helps protect business data, reduce the risk of information being intercepted, and make sure access to company systems is limited to authorised users.

A useful way to think of it is like using a private, protected lane on the internet instead of travelling on an open public road.

You are still using the internet, but your work connection is better protected from people or systems that should not be able to see or interfere with it.

STEP 1

You will receive an email invitation direct from NordLayer, please click on the 'Accept invite' button as shown below

After following the 'Accept Invite' link in the email fill in the form as shown on the next page.

STEP TWO

The image shows a registration form with five numbered steps indicated by red callouts and arrows:

- 1 Your name**: Points to the "Full name" input field containing "Lara Croft".
- 2 A password for NordLayer**: Points to the "New password" input field, which is masked with dots and has an eye icon to the right.
- 3 Confirm your password**: Points to the "Confirm password" input field, which is also masked with dots and has an eye icon to the right.
- 4 Agree to the terms and conditions**: Points to a checkbox that is currently unchecked, located next to the text "Agree to the terms and conditions".
- 5 Once complete, create your account**: Points to the "Create an account" button, which is a green rounded rectangle.

Below the password fields, there are "Password requirements" listed in two columns:

- 8+ characters
- Lowercase letter(s)
- Number(s)
- Uppercase letter(s)

Below the requirements, there is a line of text: "This service and I acknowledge [Privacy Policy](#) and the Google [Privacy Policy](#) and [Terms of Service](#) apply."

Once the account is created, your license will be activated and you will see the following message.

License activation successful!

Download the app by clicking the button below and log in to your account.

Your Organization ID

Make a note of this

STEP THREE

You may be prompted to download the NordLayer app. Before doing so, it's best to check on your machine to see if Systemagic have pre-installed this for you.

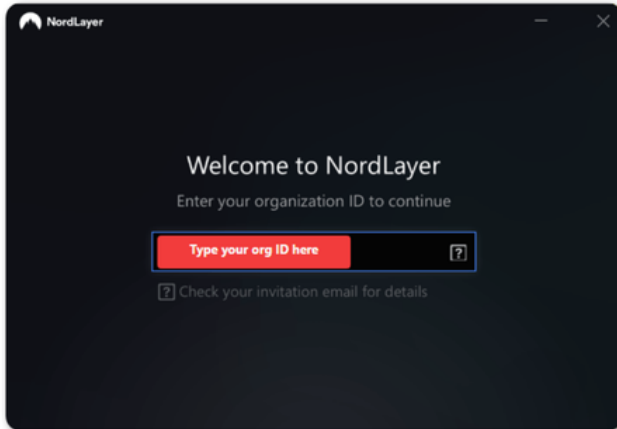

To do this, open your Applications folder, or use the search (magnifying glass in upper right) to search for NordLayer. If it's there, it's already installed.

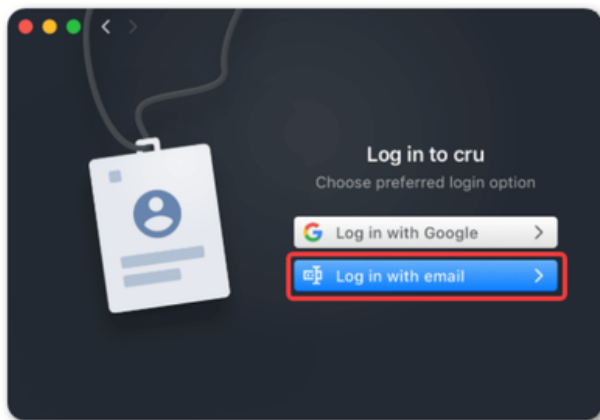

STEP FOUR - USING NORDLAYER

When you open the application for the first time, you'll be prompted to enter your organisation ID.

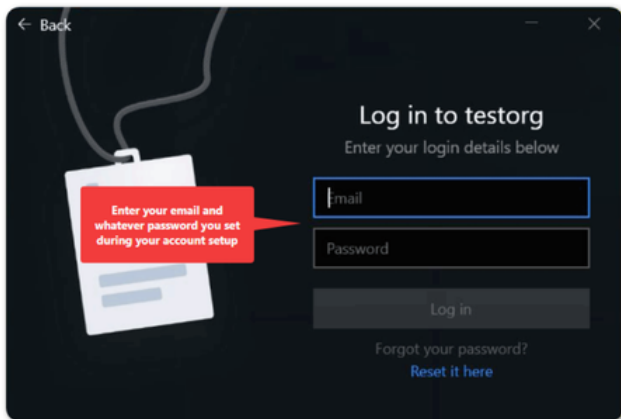

If you made a note of it from earlier, type it in now. If you didn't make a note, refer back to your registration or invitation email.

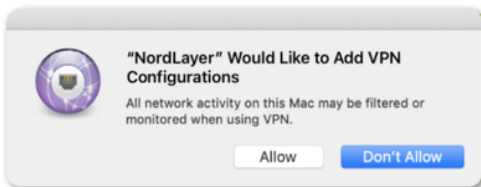

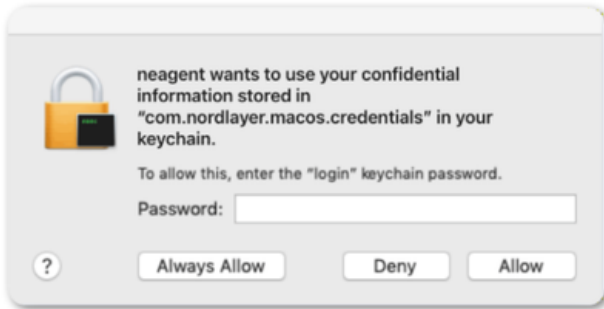

Choose 'Log in with email'

Now enter your email address and whatever password you set during the account setup phase.

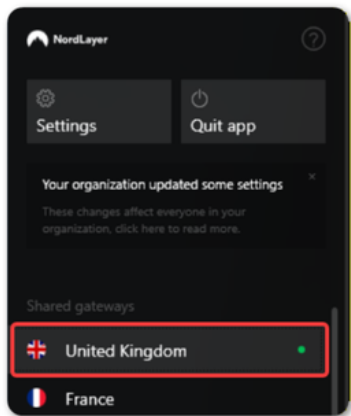

If after you log in and you're prompted for NordLayer to add a VPN configuration, you can click 'Allow', however you may need to get in touch with Systemagic to input the admin password for you.

Once logged in, you'll now be able to use the NordLayer app to connect to various gateways around the world. A good rule of thumb is to try and pick a gateway that's geographically closer to you for the fastest connection.

Once connected to a gateway, your internet traffic is now securely routed through that gateway.
